Owner/

Applicant: Ashley Niles Properties LLC

Katherine Willis, Lightwell Architecture LLC Agent:

Site Plan Review by the Boulder County Community Planning & Permitting Director is required for new building/grading/access or floodplain development permits in the plains and mountainous areas of unincorporated Boulder County. The subject review process considers potential significant impact to the ecosystem, surrounding land uses and infrastructure, and safety concerns due to natural hazards.

The Community Planning & Permitting staff values comments from individuals and referral agencies. Please check the appropriate response below or send a letter to the Community Planning & Permitting Department at P.O. Box 471, Boulder, Colorado 80306 or via email to planner@bouldercounty.org. All comments will be made part of the public record and given to the applicant. Only a portion of the submitted documents may have been enclosed; you are welcome to call the Community Planning & Permitting Department at 303-441-3930 or email planner@bouldercounty.org to request more information.

Please return responses by February 21, 2023.

(Please note that due to circumstances surrounding COVID-19, application timelines and deadlines may need to be modified as explained in the CPP Notice of Emergency Actions issued March 23, 2020 (see https://boco.org/covid-19-cpp-notice-20200323)).

We have reviewed the proposal and hav Letter is enclosed.	e no conflicts.

Certification (Please refer to the Regulations and Application Submittal Package for complete application requirements.)

I certify that I am signing this Application Form as an owner of record of the property included in the Application. I certify that the information and exhibits I have submitted are true and correct to the best of my knowledge. I understand that all materials required by Boulder County must be submitted prior to having this matter processed. I understand that public hearings or meetings may be required. I understand that I must sign an Agreement of Payment for Application processing fees, and that additional fees or materials may be required as a result of considerations which may arise in the processing of this docket. I understand that the road, school, and park dedications may be required as a condition of approval. I understand that I am consenting to allow the County Staff involved in this application or their designees to enter onto and inspect the subject

property at any reasonable time, without obtaining any prior consent.

All landowners are required to sign application. If additional space is needed, attach additional sheet signed and dated.

RE: Site Plan Review

Project: 364 2nd Ave, Niwot, CO 80544

PROJECT NARRATIVE

PROJECT SUMMARY

Niles Family Dentistry is currently located on 2nd ave in Niwot and they have been serving the Niwot community for many years. They are looking to continue their investment in Niwot and redevelop the 6,988 SF site located at 364 2nd Ave in Niwot. They are partnering with Lightwell Architecture LLC, to develop a proposed two-story commercial structure that will house Niles Family Dentistry on the first floor and the second floor will contain potential office space for Lightwell Architecture.

LANDUSE CODE ARTICLE 4 -116 NIWOT RURAL COMMUNITY DISTRICT CODE SUMMARY

Article 4 - 4-116A B. 5 - Permitted Use

The project is located in Niwot Rural Community District I, Block 5. The Principal Uses allowed include Office Use and the proposed occupancy of the building is Office or Business use (Occupancy Group B). The project did consider a mixed-use occupancy, commercial and residential, but residential is not being considered at this time.

Article 4 – 4-116A C. – Lot, Building, and Structure Requirements

The maximum Building height is 30' and 15' within 25' of the rear property line and 15' within 20' of the front property line. The side setbacks are 0'. See the attached Site Plan and Building Elevations for the setbacks and maximum heights shown and dimensioned.

The Lot Coverage for Block 5 is 50% 6,988 SF X.5 = 3,494 SF allowed

Proposed Level One Floor Area = 3,130 + 125 SF (exit stair and 2^{nd} level overhang) = 3,255 SF Total Proposed Building Coverage

FAR for Block 5: 0.6

Lot size = 6,988 SF X .6 = 4,192 SF allowed

www.lightwellarchitecture.com

303.763.0140 Page | 1

Level 1 SF = 3,130 SF + Level 2 SF = 1,050 SF = Total 4,180 SF proposed.

Article 4 – 4-116A D – Parking Requirements

The Parking requirement is 1 parking space per 500 square feet of non-residential floor area.

The proposed development square footages are 4,180 SF (Level 1-3,130 + Level 2-1,050) / 500 = 8 parking spaces. We are proposing that the parking is located in the rear yard of the site and access is proposed from the alley. With this approach, the current curb cut located on 2^{nd} ave can be eliminated to allow for a more safe and enhanced pedestrian experience. Also, credit is given for 1 space per 15' of street frontage for parcels without a curb cut on 2^{nd} ave east of franklin street. We have 50' of frontage so this yields 3 parking spaces.

Article 4 – 4-116A E. 1. A (IV) – Drainage

See attached Preliminary Drainage Report from our Civil Engineer Curtis Stevens of Sanitas Group.

Article 4 – 4-116A E. 2 – Signs

The proposed development does include signage to meet the requirements. See attached Building Elevations.

Article 4 – 4-116A E. 3. – Landscaping

In Block 5 we are required to have a landscaped front yard (10' from the property line) with the exception to walks. We proposed to meet this requirement and also have included rain gardens located in the front (and rear) yard to address the required drainage requirements. These rain gardens would serve as planters. We propose to keep the large mature deciduous tree

In Blocks 5 and 6, a minimum of 20% of the area within each parcel must consist of landscaping, which may include hardscaped plazas, outdoor seating/serving areas, walkways within on-site open space areas, and other similar hardscaped on-site amenities. Hardscaped elements shall account for no more than two-thirds of the minimum landscaped area requirement.

Lot size = 6,988 SF X 20% = 1,398 SF Required (of that the Landscaped area that is planted not hardscaped is = 466 SF

Proposed SF of landscaping = 1,971 SF (of that the Landscaped area that is planted not hardscaped is) = 690 SF

Article 4 – 4-116A E. 4. – Outdoor Lighting

Schematic Design level lighting is indicated on the exterior elevations. A Lighting Plan for all Exterior Lighting is not required at this time per the Pre App Appointment Submittal Requirements. An electrical engineer is required for this commercial project and after Site Plan Review we will engage this consultant.

Article 4 – 4-116A E. 5. – Building Materials in the Non-Historic Area & 8. NRCD I Colors

The building materials are comprised of brick, concrete, windows, cement board, steel, and wood. These materials complement the historic and present-day buildings of Niwot. We have included unique brick cornice details that are inspired by brick detailing evident in Niwot's historic district which reinforces Niwot's architectural character. See the attached proposed color and material digital chips included and the Exterior Elevations.

www.lightwellarchitecture.com

303.763.0140 Page | 2

Article 4 – 4-116A E. 6. – Building Form

a. Roofs should conform with the existing roof styles on 2nd Avenue within the same block.

The character of historic Niwot consists of many parapet or flat roof forms. We were inspired by these roof forms (which can also be found within this block specifically, portions of 300 2nd Ave.) and found it better suited for this site location and street front width (approximately 50'). A gable roof greatly increases building bulk and height, it was our intent to allow for views beyond for our neighbor buildings and lessen the building height. This approach will also provide a pedestrian-scale street presence.

b. Expanses of building façade on any side that are longer than 25 feet may, depending on site conditions and visibility, be required to incorporate design variations to break up the continuity of the wall in an attempt to reduce the possibility of a long monotonous wall.

The lot is approximately 50' wide so breaking up the continuity halfway through the building would have adverse effects on the character of the building and would result in a noncohesive building facade.

c. Second-story windows, patios, and decks shall be designed to minimize adverse impacts on the privacy of adjacent properties zoned NRCD I and Rural Residential.

Second-story windows and occupiable deck on the North East elevation are minimized in size to not have adverse impacts on the privacy of the adjacent properties.

Article 4 – 4-116A I. – Historic Landmark Designation

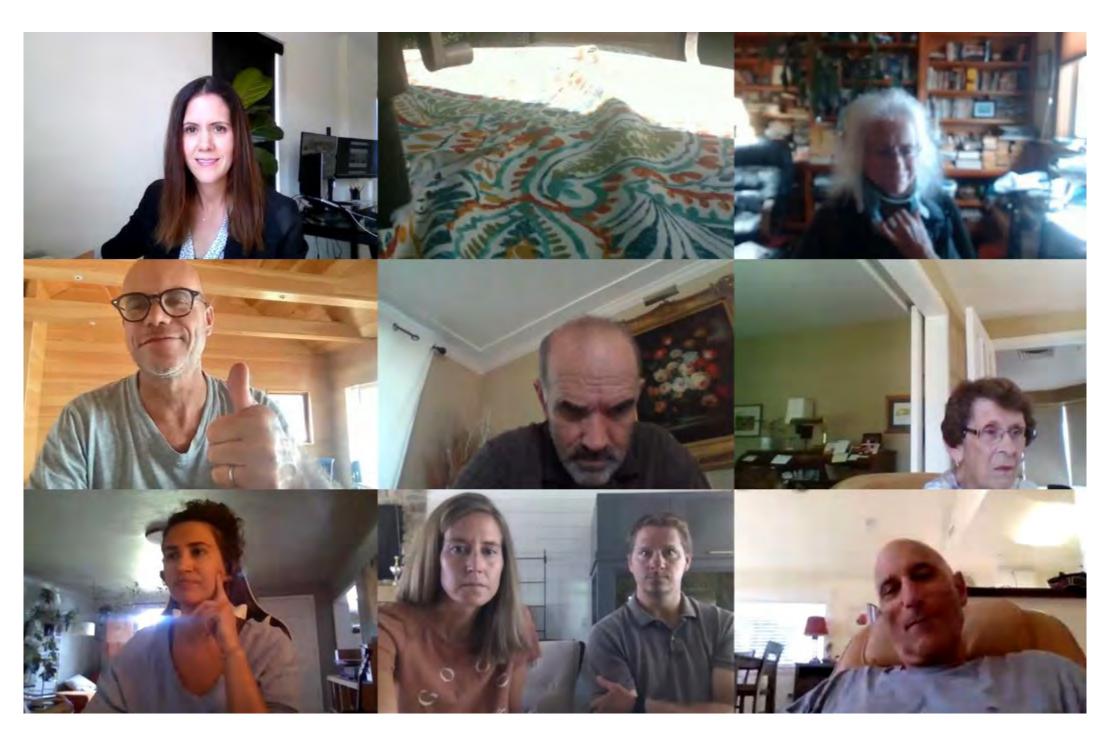

Per the attached document the existing structure is not eligible for landmark status.

NIWOT COMMUNITY ENGAGEMENT REPORT

364 2nd Ave, Niwot, CO

REPORT OF THE COMMUNITY MEETING ON 8/03/22 & PUBLIC COMMENT AT THE NDRC MEETING ON 8/10/22

PARKING & ACCESS COMMENTS:

1 Community members raised questions about curb cuts, how the flow of traffic will change, alley maintenance and improvements.

SITE COMMENTS:

(2) Lefty's is currently a place of social interaction.

(3) Corner location - Gateway to commercial Niwot

LIGHTWELL

APPLICANT RESPONSES:

1) The design is in line with the Land Use Code requirements of the design of parking and alley improvements. The existing curb cut is proposed to be eliminated to provide safety for pedestrians. The County does prefer for access to be taken from the alley to promote safety and a pedestrian experience. This is a common urban planning goal and we are following the county's direction. The Civil Engineer confirmed that the amount of traffic won't change significantly. The flow of traffic will change during business hours instead of evenings as it is now. There are 11 parking spaces provided on the site. The possible reduction of parking spaces has been avoided. Our property's alley improvements are required and necessary and we will meet those requirements.

- 2 We propose this building and the front yard also serve as a place of social interaction. The most public space of the building, the lobby, is positioned to be adjacent to 2nd Ave. Landscaping is proposed in the front yard and the Left-Hand benches are proposed for community use.
- 3 We believe this building (its recent design revisions) and location will be a social and community node at the gateway of Niwot. It will serve as an anchor and entrance to our town full of present-day character inspired by the unique fabric of the historic buildings that make Niwot what it is.

BUILDING FORM COMMENTS:

1 There was a discussion on the Building Form. As the code reads "Roofs should conform with the existing roof styles on 2nd Avenue within the same block".

Also discussed was that a gable roof on this site isn't practical considering our approximate 50' site width. A gable roof slope with our current design would increase building height and go above the height limit.

APPLICANT DESIGN REVISIONS:

1 The character of historic Niwot consists of many parapet or flat roof forms. Either a true parapet roof or a false front. These roof types are commonly paired with brick buildings, often those with 0' side yard setbacks.

The parapet roof is proposed.

A gable roof increases building bulk and it is our intent to allow for views beyond for our neighbor buildings and lessen the building height.

The 2nd avenue facade is one of numerous roof forms but what is consistent among all these roof types is a horizontal datum. Our proposed structure reinforces this horizontal datum.

Additionally, the building height is below the maximum allowed building height.

BUILDING MATERIALS IN THE NON-HISTORIC AREA COMMENTS:

1) The building isn't in character with the town. Request for more historic -looking building, from the 1900s.

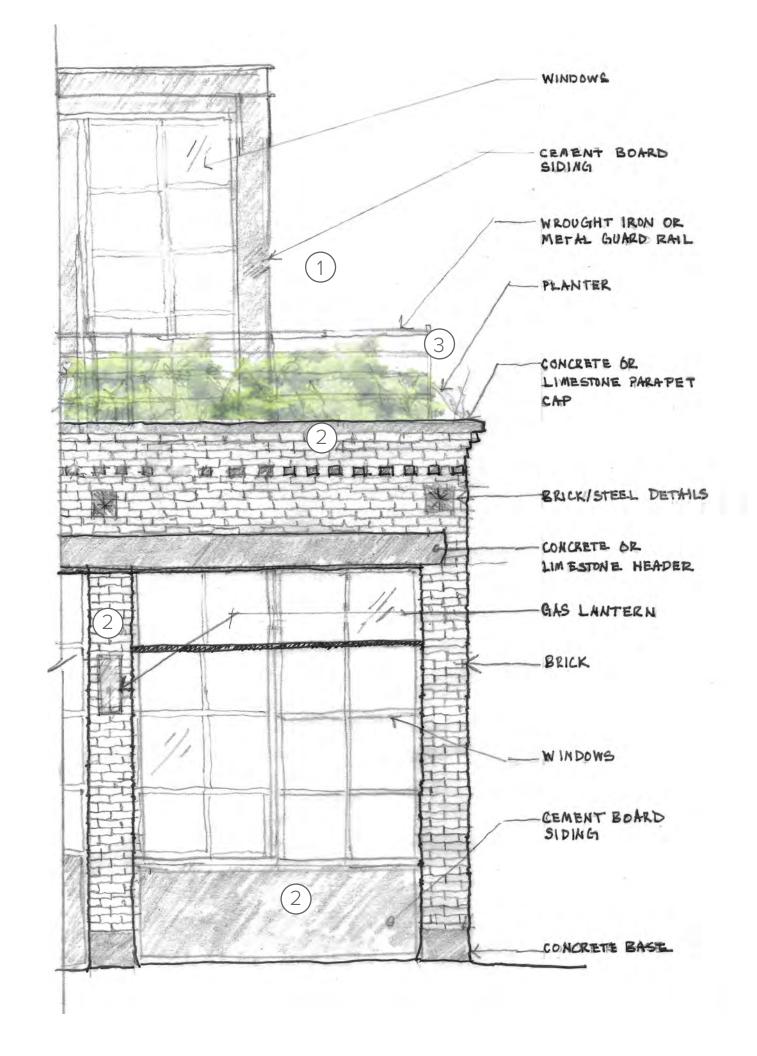

2 The design of the proposed building is too modern, there is too much glass on the front facade.

3 Glass railing is too modern and too noticeable. Wrought iron railing requested.

APPLICANT DESIGN REVISIONS:

- 1) It is our goal to complement the existing character and fabric of Niwot. As architects and planners, we are taught that we should not reproduce what was built in the 1900s. When buildings do this they essentially become false representations and diminish the value of actual structures built during this era. That being said, we are inspired by the existing massing, roof forms, brick details, and fenestration of some of the most appropriate and similar typology historic Niwot buildings
- 2 We revised the design to incorporate brick columns along the 2nd street facade. Also, we added brick cornice details, that take inspiration from many of the existing historic buildings. Brick is the most prevalent facade material and glass is reduced. Additionally, we raised the window sill which is evident on many of our historic Niwot buildings. The same window & siding-to-brick wall ratio as the Wheel Works building is proposed.
- 3 We are proposing a wrought iron or metal guardrail on the second floor instead of glass. With the use of a wider planter, we are able to place the guardrail only on the east and west sides of the structure.

Community Planning and Permitting 2045 13th Street Boulder, CO 80302

Attn: Planner Assigned to 364 2nd Avenue Niwot

To whom this may concern:

As a long-time resident of Niwot, I am writing to you to strongly consider the continued approval of the current designs for Ashley Niles Dentistry located on the said location.

Dr. Ashely Niles is a big asset to our town and provides a tremendous dental service to the Niwot and local Boulder County communities. There is a current and future business need to expand her current operations and maintain the dental services we enjoy and also a needed tax base for our community.

Her architectural design proposal is very tasteful and incorporates appropriate design elements that are consistent with the ongoing necessary improvements needed for the overall entry point into our town.

Niwot business corridor currently has a very eclectic architectural style. There exists a wide variety of building designs which have occurred over the years as evidenced by the recently abandoned feed store to the automotive shop to the liquor store. Her proposal in no way violates any of this variety and in many ways helps continue to appropriately transition to a more refreshed look for our town.

The building she is replacing is an eyesore and deteriorating. Her proposed design places an appropriate conservative but modern design that mimics other newer builds such as Wheel Works and other "newer" business establishments in the town.

For the greater good of the community providing her services and the need to continually tastefully modernize our downtown, this development is a very welcome addition to Niwot. We need this evolution so we continue to attract businesses while satisfying the needs of our local residents.

Sincerely yours,

John and Amy Klein 6483 Cranberry Court Niwot, CO 80503 Community Planning & Permitting

2045 13th Street Boulder, CO 80302

Attention: Planner assigned to 364 2nd Ave

9-26-22

To whom it may concern,

I'm writing today to underscore my support for the proposed project at 364 2nd Avenue in Niwot, CO. I've been a member of the Niwot community for more than 15 years - as a tenant, an employer, and the owner of a building in the center of old town at 137 2nd Ave.

Like most, I was drawn to Niwot because of its beauty, charm and old-town feel. Much of the town's character and allure stems from its architecture – and most notably the architecture on the west end of 2nd Avenue. The beautiful brick buildings, with their clean, rectangular design and clever signage bring you back to a time when less was more. And the large windows in the retail shops invite passersby to come inside and be a part of the community. It's like a step back in time – enchanting, welcoming and inspiring on so many levels.

The east end of 2nd Ave would benefit from buildings with a similar design and character, and the 364 project is just that. I've seen the plans and the proposal, and I'm a fervent believer that the brick, glass and natural materials in their design will bring a continuity to downtown Niwot that's currently missing. This proposed building would complement its adjacent Niwot Inn & Spa perfectly, and create a much-needed gateway to downtown Niwot from the east.

Please feel free to reach out to me if I can provide any additional opinions on this matter.

Respectfully,

Bradford Fayfield Storm Mountain Media 137 2nd Ave., Niwot, CO

September 27, 2022

Dear Boulder County Commissioners, Dale Case and Denise Grimm

I highly recommend approval of the Site Plan Review submittal for the Niles Family Dentistry commercial building at 364 2nd Avenue in Niwot.

The design is thoughtful and reinforces the character of both historic and present-day Niwot with building form, materials and window patterns.

The exterior materials complement the adjacent buildings on the block.

This project is not within the historic district, but with massing and details, complements the historic nature of Niwot's commercial district. I appreciate that it is not a 'Disneyland-like' copy, but instead is a project of its own time.

As this project moves forward, it adds much needed life to 2nd Avenue. The former Lefty's building is in very poor condition and an upgrade will enhance this block tremendously.

It is my hope, with a clear understanding of the grading of the existing alley, that the historic grade of the alley will be allowed to remain, and minimal requirements for alley redesign will be placed on this project. Improvements that address the potholes are welcome.

Niles Family Dentistry is an active member of our business community, and I am thrilled that they are investing in Niwot for the long term. They are an asset to our community and this project will be an asset for years to come.

As a business and property owner within this block, I welcome this new addition.

Thank you for your consideration.

Anne Postle, Architect
Osmosis Architecture Inc.

Owner 240 2nd Avenue, 280 2nd Avenue, 290 2nd Avenue and 104 2nd Avenue

ARCHITECTURE

6666 Apache Court Niwot, CO. 80503

September 28, 2022

Community Planning & Permitting 2045 13th Street Boulder, CO 80302

To Whom It May Concern:

My name is Lawson Drinkard. My wife and I have been residents of Niwot since 2013. I am a retired architect. Since we live so close to "downtown" Niwot, we are there for one reason or another nearly every day. We love our downtown and the variety of experiences and services it has to offer.

I'm writing to share my thoughts about the new building being proposed by Dan and Ashley Niles at 364 2nd Avenue. I have had an opportunity to review the schematic drawings and the materials pallet being proposed for this new structure which will replace a dilapidated and crumbling building which is currently a community eyesore.

Though downtown Niwot has its own character, the buildings along 2nd Avenue don't represent any singular architectural style. There are a variety of heights, shapes, materials, window patterns, and roof forms. Some are significantly more attractive than others.

The design that Lightwell Architecture is proposing reinforces the character of downtown Niwot and complements the forms, materials, and scale of the best buildings that exist there. The architects have been careful with the overall height and the roof forms of the proposed building to keep a pedestrian scale and allow for views from adjacent structures.

In some public meetings related to this proposed design, references have been made to the intersection of 2nd Avenue and Niwot Road as being the "gateway" to our town. I believe Niwot should both respect its past and look toward its future. This building does both and I respectfully request that the owners and architects be given the necessary approvals to move forward with the current design.

Sincerely,

G. Lawson Drinkard, III

Site Plan Review Fact Sheet

The applicant(s) is/are required to complete each section of this Site Plan Review (SPR) Fact Sheet even if the information is duplicated elsewhere in the SPR application. Completed Fact Sheets reduce the application review time which helps expedite the Director's Determination. Please make duplicates of this SPR Fact Sheet if the project involves more than two structures.

Project Identification: Project Name: 364 2ND AVE Property Address/Location: 364 2ND AVE Current Owner: Ashley Niles Properties LLC Size of Property in Acres:

Determining Floor Area

.16 acre

Floor Area is measured in terms of square feet. The total square footage is as everything within the exterior face of the exterior walls including garages and basements. Covered porch area that is attached to the principal structure is ncluded (see Article 18-131A). The

ed area on the diagram indicates area counted as square feet.

Residential vs. Non-Residential Floor Area

Residential Floor Area includes all attached and detached floor area (as defined in Article 18-162) on a parcel, including principal and accessory structures used or customarily used for residential purposes, such as garages, studies, pool houses, home offices and workshops. Gazebos and carports up to a total combined size of 400 square feet are exempt. Barns used for agricultural purposed are not considered residential floor area.

Note: If an existing wall(s) and/or roof(s) are removed and a new wall(s)/roof(s) are constructed, the associated floor area due to the new wall(s)/roof(s) are considered new construction and must be included in the calculation of floor area for the Site Plan Review and shown on this Fact Sheet.

If a Limited Impact Special Review is required, then call 303-441-3930 and ask for a new Pre-Application conference for the Limited Impact Special Review.

364 2nd Ave SPR 9/21/2022

Grading Calculation

Cut and fill calculations are necessary to evaluate the disturbance of a project and to verify whether or not a Limited Impact Special Review (LISR) is required. A LISR is required when grading for a project involves more than 500 cubic yards (minus normal cut/fill and backfill contained within the foundation footprint).

If grading totals are close to the 500 yard trigger, additional information may be required, such as a grading plan stamped by a Colorado Registered Professional Engineer.

Earth Work and Grading

This worksheet is to help you accurately determine the amount of grading for the property in accordance with the Boulder County Land Use Code. Please fill in all applicable boxes.

Note: Applicant(s) must fill in the shaded boxes even though foundation work does not contribute toward the 500 cubic yard trigger requiring Limited Impact Special Use Review. Also, all areas of earthwork must be represented on the site plan.

Earth Work and Grading Worksheet:

	Cut	Fill	Subtotal
Driveway and Parking Areas	11	17	28
Berm(s)	0	0	0
Other Grading Slope Tie-In/Drainage	0	0	0
Subtotal	11	17	28 Box 1
* If the total in Box 1 is g required.	reater than 500 cubic ya	rds, then a Limited Impac	ct Special Review is
	Cut	Fill	Total
Foundation	574	19	593
		foundation excavation oved from the property	538

Excess Material will be Transported to the Following Location:

Excess Materials Transport Location:	
T.B.D Contractor & earthwork subcontractor not selected at—this time, so accurate site for export has not been determined.—Will be selected and provided prior to building permitting.	

Narrative

Use this space to describe any special circumstances that you feel the Land Use Office should be aware of when reviewing your application, including discussion regarding any factors (listed in Article 4-806.2.b.i) used to demonstrate that the presumptive size limitation does not adequately address the size compatibility of the proposed development with the defined neighborhood. If more room is needed, feel free to attach a separate sheet.

SEE ATTACHED.			

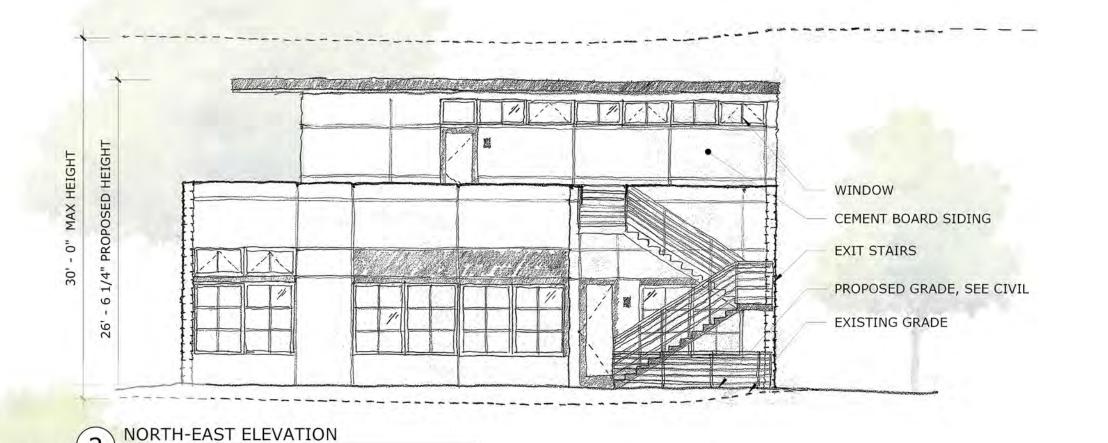

Is Your Property Gated and Locked?

Note: If county personnel cannot access the property, then it could cause delays in reviewing your application.

Certification

I certify that the information submitted is complete and correct. I agree to clearly identify the property (if not already addressed) and stake the location of the improvements on the site within four days of submitting this application. I understand that the intent of the Site Plan Review process is to address the impacts of location and type of structures, and that modifications may be required. Site work will not be done prior to issuance of a Grading or Building Permit.

CERTIFICATION STATEMENT

I hereby certify that this plan and report for the preliminary drainage design of Niles Family Dentistry was prepared by me, or under my direct supervision, in accordance with the provisions of the Boulder County Storm Drainage Criteria Manual.

For and On Behalf Of:

The Sanitas Group, LLC

Registered Professional Engineer

State of Colorado No. 40337

1.0 INTRODUCTION

This **Preliminary Drainage Report** [Report] is prepared on behalf of Niles Properties LLC for the proposed **Niles Family Dentistry** redevelopment project. The purpose of this report is to address the Boulder County [County] requirements for a "Preliminary Drainage Report and Plan" as outlined in Section 200 "Submittals", "*Storm Drainage Criteria Manual*" [1]. This Report documents the existing drainage conditions present at the site and provides an analysis of the drainage conditions and water quality measures proposed for the **Niles Family Dentistry** redevelopment project.

2.0 EXISTING SITE CONDITIONS

The proposed project site is located at 364 2nd Avenue and is in the Southeast quarter of Section 25, Township 2 North, Range 70 West of the 6th P.M., County of Boulder, State of Colorado.

The 6,987-sf (0.160 acre) property is located within Lots 19 and 20, Block 26, Niwot, and measures 140-ft by 50±-ft.

The property is located on the northeast side of 2^{nd} Avenue with an access drive off of 2^{nd} Avenue. There is a 20-ft wide alley adjacent to the northeast side of the property. Commercial properties are located to the northwest and southeast of the site.

As shown on the "Existing Conditions Drainage Plan" included in the back pocket of this report, the existing site is currently developed with a one-story building and associated gravel drive, wood decks, and landscaping. There is an existing 4-ft wide concrete sidewalk on the northeast side of 2^{nd} Avenue. Existing vegetation consists of grasses and trees.

The project site is within the Dry Creek drainage basin. Dry Creek is located approximately 2,100-ft east of the site. There is an existing 30-inch RCP storm sewer in 2nd Avenue and four grated inlets on the northeast side of 2nd Avenue, between Niwot Road and Franklin Street. The storm sewer drains to the northwest to Franklin Street, then northeast to Neva Road, discharging into a roadside ditch on the south side of Neva Road. The ditch drains to the east, then south to a detention pond located in the Johnson Farm Replat 1 subdivision before discharging into Dry Creek.

USDA Natural Resources Conservation Service classified the soils on the property as Nunn sandy clay loam (NnA) soils, having a Group C hydrologic soil [2].

As delineated on FEMA Flood Insurance Rate Map 08013CO410J, effective date 18 December 2012 [3], the project site is not impacted by a regulatory 100-year or 500-year floodplain. The site is located within FEMA Flood Zone X (area of minimal flood hazard).

3.0 PROPOSED DEVELOPEMENT

The proposed redevelopment of the **364 2nd Avenue** site will consist of the construction of a new two-story commercial building and a parking lot on the northeast portion of the site, accessed from the adjacent alley.

The proposed development layout and grading are shown on the "*Proposed Conditions Drainage Plan*" included in Appendix F of this report.

4.0 DESIGN CRITERIA

This Report was prepared using the criteria outlined in the Boulder County "Storm Drainage Criteria Manual", [Criteria] [1], the Mile High Flood District [MHFD] "Urban Storm Drainage Criteria Manual, Volumes 1 and 2" [4], and the Mile High Flood District "Urban Storm Drainage Criteria Manual, Volume 3 – Best Management Practices" [5].

5.0 HYDROLOGY

The rational method was used to calculate runoff rates for the 2-year, 5-year, 10-year and 100-year storm events. The 5-year and 100-year events are presented as the minor and major design storms, respectively. Per Section 501 of the Criteria, NOAA Atlas 2 point rainfall values shall be used as long as the UDFCD (now known as the MHFD) continues to prefer Atlas 2 to Atlas 14. In 2016 MHFD adopted the new Atlas 14 values, therefore, NOAA Atlas 14 point rainfall values were used in this drainage report.

No known Master Drainage Plans have been prepared for the project site.

Existing Conditions

The existing drainage basins are delineated on the "Existing Conditions Drainage Plan" provided in Appendix F of this report. Drainage basin delineation, storm flow directions and off-site drainage conditions were determined visually during a site visit in June 2022. The site does not appear to receive any significant offsite drainage.

The existing site has been delineated into two drainage basins labeled Basin A1x and A2x where the "x" denotes existing conditions.

Basin A1x

Drainage Basin A1x is 0.11 acres consisting of the northeasterly portion of the existing building, wooden decks and landscape area on the northeasterly portion of the site. Runoff from Basin A1x drains southeasterly onto the adjacent property to the southeast of the subject property, designated Design Point (DP) 1.

Basin A2x

Drainage Basin A2x is 0.05 acres consisting of the southwesterly portion of the existing building, wooden decks, gravel driveway and landscape area on the southwesterly portion of the site. Runoff from Basin A2x drains southwesterly to the public storm sewer system in 2^{nd} Avenue, designated DP 2.

Existing conditions storm water runoff is presented in Table 5.4. Basin description, imperviousness, weighted runoff coefficients, time of concentration and runoff values are provided for the existing drainage basin on a worksheet labeled "Rational Method Calculations" provided in Appendix B. For ease of reference, the existing conditions storm water flows are presented on the "Existing Conditions Drainage Plan" provided in the back pocket of this report.

Table 5.4: Storm Runoff by Basin - Existing Conditions

Basin I.D.	Design Point	5-year Minor Design Storm Runoff [cfs]	100-year Major Design Storm Runoff [cfs]	
A1x	1	0.06	0.48	
A2x	2	0.05	0.26	

Proposed Conditions

The proposed on-site drainage basins are delineated on the "*Proposed Conditions Drainage Plan*" provided in Appendix F of this report.

With the development proposal, the site is divided into two drainage basins, labeled Basins A1 and A2.

Basin A1

Drainage Basin A1 is 0.07 acres covering the northeast portion of the site and consists of the concrete and permeable paver parking lot and landscape area including Rain Garden A, located on the east side of the parking lot. Approximately 1,066-sf of permeable pavers will be used in the parking lot as a Low Impact Development (LID) feature. Runoff from Basin A1 will drain to Rain Garden A, then drain to the Rain Garden B outlet structure via a private 8" PVC storm sewer. A new 12" PVC storm sewer approximately 24-ft long will tie into the existing grated inlet in 2nd Avenue.

Basin A2

Drainage Basin A2 is 0.09 acres covering the southwest portion of the site, consisting of the proposed building, concrete sidewalks and landscape area including Rain Garden B, located adjacent to 2^{nd} Avenue. Runoff from Basin A2 will drain to Rain Garden B, then release to the public storm sewer in 2^{nd} Avenue via a 12^{nd} PVC storm sewer.

Proposed conditions storm water runoff for each basin is presented in Table 5.5. Basin description, imperviousness, weighted runoff coefficients, time of concentration and runoff values are provided for the proposed drainage basin on a worksheet labeled "Rational Method Calculations" provided in Appendix B. For ease of reference, the proposed conditions storm water flows are presented on the "Proposed Conditions Drainage Plan" provided in the back pocket of this report. A comparison of Existing and Proposed Conditions runoff rates for the two primary design points and overall site is presented in Table 5.6.

Table 5.5: Storm Runoff by Basin - Proposed Conditions - Phase 2

Basin I.D.	Design Point	5-year Minor Design Storm Runoff [cfs]	100-year Major Design Storm Runoff [cfs]
A1		0.13	0.50
A2		0.23	0.67
	1	0.00	0.00
	2	0.01	0.47

Table 5.6: Storm Runoff Comparison

Design Point	5-year Minor Design Storm Runoff [cfs]		Δ [cfs]	100-year Major Design Storm Runoff [cfs]		Δ [cfs]
Tome	Existing Conditions	Proposed Conditions		Existing Conditions	Proposed Conditions	
1	0.06	0.00	-0.06	0.48	0.00	-0.48
2	0.05	0.01	-0.04	0.26	0.47	0.21
Overall Site	0.11	0.01	-0.10	0.74	0.47	-0.27

The proposed redevelopment project will result in decreases in runoff rates for the overall site compared to existing conditions due to the proposed rain gardens and controlled release rates through the outlet structures. Since all onsite runoff is directed to the proposed rain gardens, the runoff draining to the adjacent property at Design Point 1 will be eliminated, resulting in a slight increase in runoff at Design Point 2 during the 100-year major design storm.

6.0 HYDRAULICS

The proposed storm sewer is sized to convey the major storm runoff. Hydraulic calculations are provided in Appendix C.

7.0 STORM WATER DETENTION

Stormwater detention is required on the site to limit proposed conditions runoff rates to the existing conditions runoff rates. Two rain gardens will be utilized to provide both water quality treatment and stormwater detention. Rain Garden A will contain an 8" PVC outlet pipe to convey the discharge

from the outlet structure to the Rain Garden B outlet structure. The Rain Garden B outlet structure will convey the discharge from the rain gardens to the public storm sewer in 2^{nd} Avenue via a 12-inch PVC outlet pipe. MHFD-Detention_v4.05 was used to size the rain gardens and outlet structures. The peak runoff rates at the two design points and overall site are provided in Table 5.6.

8.0 STORMWATER QUALITY AND EROSION CONTROL

The proposed project will implement permanent stormwater quality treatment Best Management Practices (BMPs) by utilizing two rain gardens (combination water quality and stormwater detention) to treat the runoff from the site. The rain gardens will contain an 18-inch growing media layer above 6-inches (minimum) of filter material with an underdrain within the filter material layer. The rain garden outlet structures are designed in accordance with MHFD recommendations to release the water quality capture volume (WQCV) over a 12 hour drain time. The outlet structures will also control the release of the excess urban runoff volume (EURV) and major design storm. The outflow from the rain garden outlet structures will discharge to the public storm sewer in 2nd Avenue.

The USDA Natural Resources Conservation Service soil classification on the project site is Nunn sandy clay loam, having a Group C hydrologic soil rating [2]. Group C soils typically have a slow infiltration rate when saturated. Based on the Group C soil rating and close proximity of the rain gardens to the proposed building, the rain gardens will be designed for no infiltration with a 4-inch slotted PVC underdrain.

Water quality calculations are provided in Appendix E.

Construction Best Management Practices [BMPs] will be installed prior to and during construction, to restrict the amount of sediment transported offsite by either wind or water. Construction BMPs include vehicle tracking control at the construction entrance, silt fencing, concrete washouts, and dust control. Detailed construction erosion control/stormwater management plans will be provided with the construction/permit documents.

9.0 WETLAND IMPACTS

There are no known wetlands located on the project site.

10.0 CONCLUSIONS

This Report meets the County's requirements for Preliminary Drainage Report information as outlined in the Criteria. The Report documents the existing drainage conditions present at the site and provides an analysis of the drainage conditions and water quality measures proposed for the **Niles Family Dentistry** redevelopment project. The proposed redevelopment will not adversely affect downstream drainage facilities or properties. Runoff rates for the minor and major storms will be less than existing runoff rates for the overall site.

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
NnA	Nunn sandy clay loam, 0 to 1 percent slopes	С	0.4	100.0%
Totals for Area of Interest			0.4	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Atta	schment A. Maintenance Schedule and Description	

Attachment B. Inspection Form

Attachment C. BMP Detail Drawings

OWNER RESPONSIBILITIES

The owner of permanent stormwater quality features, also referred to as best management practices (BMPs), shall protect, inspect, maintain, repair, and reconstruct the BMPs and associated drainage infrastructure on the property to ensure full, functional operation in accordance with the specifications of this *Inspection and Maintenance Guide*. In instances where inspection and maintenance duties have been assigned to a delegated representative via an agreement or contract, the owner maintains responsibility in ensuring the specifications of this guide have been carried out. The specifications of this *Guide* are pursuant to the following Boulder County requirements:

• Boulder County Maintenance Agreement

ONSITE FACILITIES

This Guide applies to the following BMPs on the property:

• Rain Garden (bioretention): The are two rain gardens: Rain Garden A is located on the southeast side of the parking lot, and Rain Garden B is located on the southwest side of the building. The rain gardens are designed for no infiltration and each rain garden contains a 4" slotted PVC underdrain. The outlet structures contain an orifice plate at the 4" PVC underdrain outlet along with a restrictor plate over the outlet pipe which discharges to the public storm sewer in 2nd Avenue.

INSPECTION REQUIREMENTS

A documented visual inspection of each BMP on the property is required per the documented inspection frequency listed in Table 1. Inspections shall be documented using the forms provided in Attachment B. The documented inspection shall be performed between May and August, when vegetation is not dormant and snow does not cover the BMP. Completed inspection forms shall be kept by the owner or their delegated representative for a minimum of five years and provided to Boulder County upon request.

Boulder County personnel will conduct routine oversight inspections of each BMP on the property to ensure the facilities are functioning as designed. The County will correspond with the owner or delegated representative when corrective actions are required. Failure to implement corrective actions may result in enforcement actions including civil penalties and/or criminal prosecution.

Table 1. Required BMP inspection frequency

Name BMP Type		BMP T	уре	Frequency
Rain Garden		Biorete	ntion (Rain Garden)	Annually

MAINTENANCE ACTIVITIES

Maintenance is essential for BMPs to be effective. Maintenance activities include both routinely scheduled activities and periodic larger efforts to repair or restore system components. An effective routine maintenance program can prevent more costly repairs later on. As part of routine maintenance efforts, BMPs should be visually inspected to identify build-up or blockages of trash, debris, or sediment; check for damage; and determine current

maintenance needs. BMPs should also be visually inspected after storms and snow melt to assess whether stormwater in the BMP is draining as expected.

The recommended maintenance schedule and description based on BMP type is provided in Attachment A. These recommendations are based on guidance from the Urban Drainage and Flood Control District (UDFCD) and the experience of the preparing engineer.

Inspection and maintenance personnel are recommended to reference the <u>Colorado Stormwater Center Inspection</u> and <u>Maintenance Field Guide</u> for visual depictions of maintenance actions.

ATTACHMENT A. MAINTENANCE SCHEDULE AND DESCRIPTION

Bioretention (Rain Garden)

Recommended Maintenance Schedule and Description

Maintenance Schedule

Category	Element	Recommended Frequency
Routine	Visual Inspection	Twice annually following precipitation
	Debris and Litter Removal	As needed, checked monthly
	Mowing and Plant Care	Every two weeks, seasonally dependent
	Irrigation Scheduling and Maintenance	As needed, checked monthly
	Replacement of Wood Mulch	As needed, checked annually
Rehabilitative	Sediment Removal and Growing Media Replacement	As needed
	Erosion and Structural Repairs	As needed

Visual Inspection

Inspect the infiltrating surface at least twice annually following precipitation events to determine if the bioretention area is providing acceptable infiltration. Bioretention facilities are designed with a maximum depth for the WQCV of one foot and soils that will typically drain the WQCV over approximately 12 hours. If standing water persists for more than 24 hours after runoff has ceased, clogging should be further investigated and remedied. Additionally, check for erosion and repair as necessary.

Debris and Litter Removal

Remove debris and litter from the infiltrating surface to minimize clogging of the media. Remove debris and litter from the overflow structure.

Mowing and Plant Care

- **All vegetation:** Maintain healthy, weed-free vegetation. Weeds should be removed before they flower. The frequency of weeding will depend on the planting scheme and cover. When the growing media is covered with mulch or densely vegetated, less frequent weeding will be required.
- Grasses: When started from seed, allow time for germination and establishment of grass prior to mowing. If mowing is required during this period for weed control, it should be accomplished with hand-held string trimmers to minimize disturbance to the seedbed. After established, mow as desired or as needed for weed control. Following this period, mowing of native/drought tolerant grasses may stop or be reduced to maintain a length of no less than 6 inches. Mowing of manicured grasses may vary from as frequently as weekly during the summer, to no mowing during the winter.

Irrigation Scheduling and Maintenance

Adjust irrigation throughout the growing season to provide the proper irrigation application rate to maintain healthy vegetation. Less irrigation is typically needed in early summer and fall, while more irrigation is needed during the peak summer months. Native grasses and other drought tolerant plantings should not typically require routine irrigation after establishment, except during prolonged dry periods.

Check for broken sprinkler heads and repair them, as needed. Completely drain the irrigation system before the first winter freeze each year. Upon reactivation of the irrigation system in the spring, inspect all components and replace damaged parts, as needed.

Replacement of Wood Mulch

Replace wood mulch only when needed to maintain a mulch depth of up to approximately 3 inches. Excess mulch will reduce the volume available for storage.

Sediment Removal and Growing Media Replacement

If ponded water is observed in a bioretention cell more than 24 hours after the end of a runoff event, check underdrain outfall locations and clean-outs for blockages. Maintenance activities to restore infiltration capacity of bioretention facilities will vary with the degree and nature of the clogging. If clogging is primarily related to sediment accumulation on the filter surface, infiltration may be improved by removing excess accumulated sediment and scarifying the surface of the filter with a rake. If the clogging is due to migration of sediments deeper into the pore spaces of the media, removal and replacement of all or a portion of the media may be required. The frequency of media replacement will depend on site-specific pollutant loading characteristics. Based on experience to date in the metro Denver area, the required frequency of media replacement is not known. To date UDFCD is not aware of any rain gardens constructed to the recommendations of these criteria that have required full replacement of the growing media. Although surface clogging of the media is expected over time, established root systems promote infiltration. This means that mature vegetation that covers the filter surface should increase the life span of the growing media, serving to promote infiltration even as the media surface clogs.

Erosion and Structural Repairs

Repair basin inlets, outlets, and all other structural components required for the basin to operate as intended. Repair and vegetate eroded areas as needed following inspection.

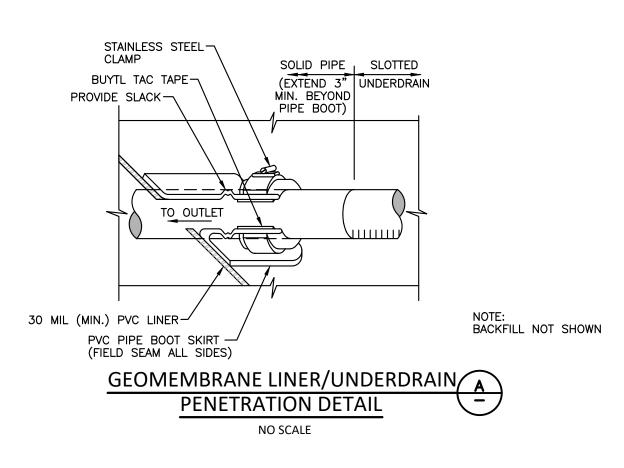

ATTACHMENT B. INSPECTION FORM

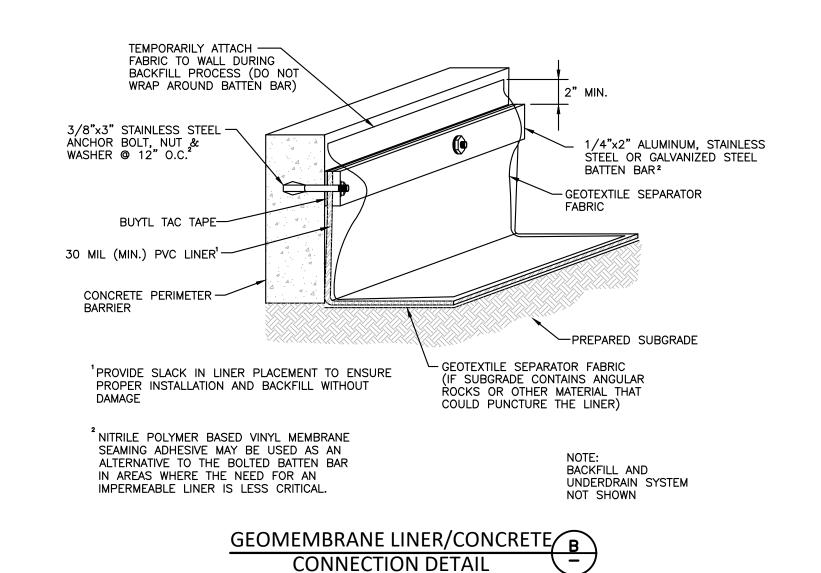

Bioretention (Rain Garden) Inspection Form

This inspection form shall be completed annually, kept for a minimum of five years, and made available to Boulder County upon

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.05 (January 2022)

Project: 364 2nd Avenue

	Estimated	Estimated	
	Stage (ft)	Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	0.32	0.002	Filtration Media
Zone 2 (EURV)	1.14	0.005	Circular Orifice
one 3 (100-year)	1.94	0.005	Weir&Pipe (Circular)
' <u>-</u>	Total (all zones)	0.012	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface) 2.20 Underdrain Orifice Diameter = 0.22 inches

	Calculated Parameters for Underdra				
Underdrain Orifice Area =	0.0	ft ²			
Underdrain Orifice Centroid =	0.01	feet			

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Centroid of Lowest Orifice = N/A ft (relative to basin bottom at Stage = 0 ft) Depth at top of Zone using Orifice Plate = N/A ft (relative to basin bottom at Stage = 0 ft) Orifice Plate: Orifice Vertical Spacing = N/A inches Orifice Plate: Orifice Area per Row = N/A sq. inches

IP)	Calculated Paramet	ters for Plate
Q Orifice Area per Row =	N/A	ft ²
Elliptical Half-Width =		feet
Elliptical Slot Centroid =	N/A	feet
Elliptical Slot Area =	N/A	ft ²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (optional)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	N/A							
Orifice Area (sq. inches)	N/A							

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Orifice Area (sq. inches)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

User Input: Vertical Orifice (Circular or Rectangular)

Zone 2 Circular Not Selected Invert of Vertical Orifice 0.32 N/A ft (relative to basin bottom at Stage = 0 ft) Depth at top of Zone using Vertical Orifice = N/A ft (relative to basin bottom at Stage = 0 ft) 1.14 Vertical Orifice Diameter = 0.41 N/A inches

	<u>Calculated Parameters for Vertical Orifice</u>						
	Zone 2 Circular	Not Selected					
Vertical Orifice Area =	0.00	N/A	ft ²				
ertical Orifice Centroid =	0.02	N/A	feet				
		,					

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir and No Outlet Pipe) Not Selected

	ZOTIE J WEII	Not Selected	
Overflow Weir Front Edge Height, Ho =	1.14	N/A	ft (relative to basin bottom at Stage =
Overflow Weir Front Edge Length =	2.00	N/A	feet
Overflow Weir Grate Slope =	0.00	N/A	H:V
Horiz. Length of Weir Sides =	2.00	N/A	feet
Overflow Grate Type =	Close Mesh Grate	N/A	
Debris Clogging % =	0%	N/A	%

Zone 3 Weir

Outlet Pipe)	Calculated Parameters for Overflow Weir			
	Zone 3 Weir	Not Selected		
$e = 0$ ft) Height of Grate Upper Edge, $H_t =$	1.14	N/A	feet	
Overflow Weir Slope Length =	2.00	N/A	feet	
Grate Open Area / 100-yr Orifice Area =	76.71	N/A		
Overflow Grate Open Area w/o Debris =	3.16	N/A	ft ²	
Overflow Grate Open Area w/ Debris =	3.16	N/A	ft ²	

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

	Zone 3 Circular	Not Selected
Depth to Invert of Outlet Pipe =	2.30	N/A
Circular Orifice Diameter =	2.75	N/A

ft (distance below basin bottom at Stage = 0 ft) inches

		Zone 3 Circular	Not Selected	
m at Stage = 0 ft)	Outlet Orifice Area =	0.04	N/A	ft ²
	Outlet Orifice Centroid =	0.11	N/A	feet
Half-Central Angle	of Restrictor Plate on Pipe =	N/A	N/A	radians

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage=	1.80	ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length =	10.00	feet
Spillway End Slopes =	0.00	H:V
Freeboard above Max Water Surface =	1.00	feet

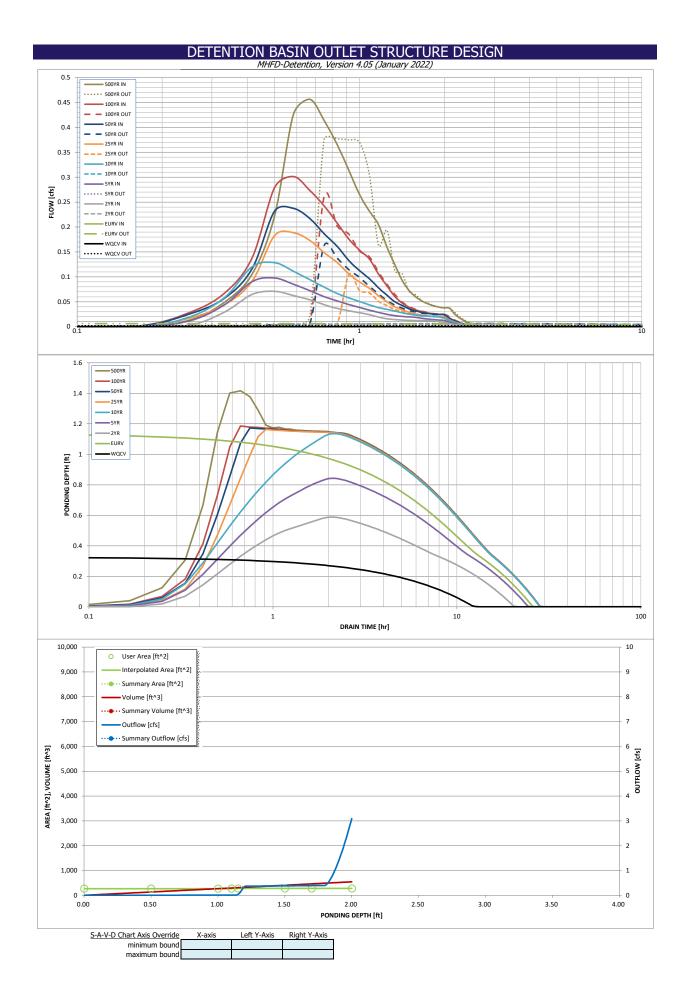

Calculated Parameters for Spillway Spillway Design Flow Depth= 0.04 feet Stage at Top of Freeboard = feet 2.84 Basin Area at Top of Freeboard = 0.01 acres Basin Volume at Top of Freeboard = 0.01 acre-ft

EXISTING CONDITIONS SURVEY NOTES

- 1. THE EXISTING CONDITIONS BASED ON IMPROVEMENT SURVEY PLAT BY FLATIRONS, INC. DATED 3/9/2022, JOB NUMBER 22-77,964.
 - 2. THE LOCATION OF THE UTILITIES SHOWN HEREON ARE BASED ON THE FIELD SURVEY BY FLATIRONS, INC. THE LOCATIONS OF THE UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON SAID SURVEY AND INFORMATION PROVIDED BY OTHERS (WHICH MAY INCLUDE GIS DATA, THE UTILITY OWNER OR UTILITY LOCATING SERVICES). THE SANITAS GROUP, LLC IS NOT RESPONSIBLE FOR UTILITY INFORMATION PROVIDED BY OTHERS. THE SANITAS GROUP, LLC RECOMMENDS THAT THE LOCATION OF THE UTILITIES BE FIELD VERIFIED PRIOR TO ANY DIGGING ON, OR ADJACENT TO THE SUBJECT
 - 3. EXISTING TREE LOCATIONS ARE BASED ON THE FIELD SURVEY BY
 - 4. BASIS OF BEARINGS: A BEARING OF NORTH 40°02'14" EAST ALONG THE NORTHWEST LINE OF LOT 19, BLOCK 26, NIWOT, BETWEEN A #4 REBAR WITH 1" YELLOW PLASTIC CAP (ILLEGIBLE) AT THE WEST CORNER OF SAID LOT 19 AND A #5 REBAR WITH 1 1/2" ALUMINUM CAP "FLATIRONS SURV 16406" AT THE NORTH CORNER OF SAID LOT 19.
 - 5. THE SUBJECT PROPERTY CONTAINS A GROSS AREA OF 6,987 SQUARE FEET (0.160 ACRES), MORE OR LESS.
 - 6. BENCHMARK: A #4 REBAR WITH 1" YELLOW PLASTIC CAP (ILLEGIBLE) LOCATED AT THE WEST CORNER OF LOT 19, BLOCK 26, NIWOT. ELEVATION = 5096.92 FEET, NAVD 88 DATUM.
